Mobile engineer working in Swift/SwiftUI and Flutter since 2022. Led Moonlight's move from a native iOS app to a single Flutter codebase and own its mobile stack end to end, from architecture and CI/CD to App Store and Google Play releases. Previously nearly three years at Shortcut Balkans building features for REMA 1000's grocery app.

Experience

Moonlight — Interactive storytelling platform (~70K users) · Norway, remote

Lead Mobile Engineer · Full-time

Jan 2026 – Present

- Led the rebuild of the native Swift app as one Flutter codebase (BLoC) for iOS and Android; shipped Android to Google Play in early 2026 and retired the native iOS app in mid-2026.
- Moonlight's only mobile engineer: own architecture, CI/CD (GitHub Actions + Fastlane), signing and builds, and App Store and Google Play releases, including Play policy compliance.
- Work directly with the CEO and backend engineers on scope, API contracts and data models.

iOS Developer · Part-time

Jan 2022 – Dec 2025

- Built and maintained the native iOS app in Swift, SwiftUI and UIKit: story reader, reactions, contests and leaderboards, comments, onboarding.
- Migrated UIKit screens to SwiftUI, built a component library and design system, and improved VoiceOver accessibility.
- Set up CI/CD with GitHub Actions and Fastlane, AppsFlyer attribution with OneLink deep links, and Firebase analytics exported to BigQuery.
- Built encrypted DM push notifications, decrypted on device in a Notification Service Extension.

ELA Analytics AS — Norway, remote

AI Evaluation Engineer · Part-time contract

Mar 2026 – Sep 2026

- Designed reproducible software-engineering tasks (public GitHub repos, pinned commits, deterministic tests) to evaluate AI coding agents, including work in Xcode and the iOS Simulator.
- Scored agent output on instruction following, code quality, testing discipline and task completion to compare model versions.

Shortcut Balkans — Client: REMA 1000, Norway

iOS Developer · Full-time

Feb 2023 – Dec 2025

- Built production features for REMA 1000's grocery app, used by millions in Norway: shopping lists with auto-sorting by store section, barcode/GTIN search, Scan & Pay, coupons.
- Worked on accessibility and large-scale legacy refactors; contributed to the shared design system with international PMs, designers and QA.
- Represented Shortcut Balkans at its first developer meetup (Tetovo, 2024) with a live SwiftUI coding session.

Projects

Automatik.mk — Co-founder & Engineer · live

- Price-comparison platform for the Macedonian market: built the product and the pipeline that scrapes and normalizes retailer prices. Native app in development.

Skills

Languages: Swift, Dart, Java, Kotlin (familiar) · **Spoken:** Albanian, Macedonian, English (fluent)

iOS: SwiftUI, UIKit, async/await, Combine, StoreKit, app extensions, VoiceOver accessibility

Flutter & Android: Flutter, BLoC, Jetpack Compose (familiar)

Architecture: MVVM, state management, modularization, design systems, API and data-model design

Testing & quality: XCTest, unit testing, Instruments, Firebase Crashlytics

Tooling: Xcode, SPM, Android Studio, Git, GitHub Actions, Fastlane, App Store Connect, Google Play Console, Firebase, BigQuery, AppsFlyer

Education

Faculty of Computer Science & Engineering (FINKI), Skopje

2021 – Present

Bachelor of Engineering in Computer Science — Computer Engineering (*in progress*)
