Experience

Moonlight — Interactive storytelling platform (~70K users, growing)

iOS Developer

June 2022 – Present

- Own the core iOS app: architecture, state management, SwiftUI component library, and a custom design system.
- Built interactive story readers, engagement mechanics (reactions, contests, leaderboards), onboarding flows, and AI tooling.
- Own the full release pipeline — CI/CD with GitHub Actions + Fastlane, App Store submissions, signing and build configuration, and attribution/analytics (AppsFlyer).
- Collaborate directly with backend engineers on API contracts and data models.

Flutter Developer & Team Lead

October 2025 – Present

- Leading the rebuild of Moonlight as a cross-platform Flutter app, coordinating and delegating work across the team.
- Architected the app with BLoC state management and shipped it to Google Play, handling build configuration, content-policy compliance, and release management.
- Integrated backend APIs and aligned data contracts with the server team.

REMA 1000 — Bella (Shortcut Balkans, Norway)

iOS Developer

March 2023 – January 2026

- Developed production features for Norway's biggest grocery app, used by millions.
- Implemented shopping list management, auto-sorting by store section, and barcode/GTIN search.
- Worked on Scan & Pay, coupons, accessibility improvements, and large-scale legacy refactors.
- Contributed to the design system, collaborating with international teams (PMs, designers, QA).

Projects

Automatik.mk — Co-founder & Engineer · live

- Price-comparison platform for the Macedonian market; built the data pipeline (scraping + normalization) and the product.
- Native mobile app in active development, built with an AI-assisted workflow.

Skills

Languages: Swift, Dart, Kotlin (familiar, growing), Java

Mobile & UI: SwiftUI, Flutter, UIKit, Jetpack Compose (familiar), BLoC, MVVM, custom design systems

Architecture: App architecture & state management, modularization, API/data-model design

Backend & Data: RESTful APIs, Firebase, JSON, third-party SDK integration

Tooling & Release: Xcode, Android Studio, Git, GitHub Actions, Fastlane, App Store Connect, Google Play Console, AppsFlyer

Practices: CI/CD, unit testing, AI-assisted development (Claude Code, Copilot), UX design principles, English (fluent)

Education

Faculty of Computer Science & Engineering (FINKI), Skopje

Bachelor of Engineering in Computer Science — Computer Engineering (*in progress*)
